Updates in Ultrasound for Gynecological Diseases

🕒 **Deadline: 30 November 2022**

Dear Colleagues,

Clinical and Experimental Obstetrics & Gynecology (CEOG) is an international, peer-reviewed, open access journal that covers a wide range of obstetrics and gynecology-associated topics, including general gynecology, ultrasound in obstetrics and gynecology, reproductive medicine, infertility and gynecologic surgery.

We propose a Special Issue focusing on the latest updates in gynecologic ultrasound, aiming to encompass under one umbrella the most recent data from clinical and/or experimental studies, as well as literature reviews related to ultrasound for a wide range of gynecological diseases. These diseases include endometriosis, adenomyosis, uterine fibroids, ovarian cysts, abnormal uterine bleeding, endometrial cancer, infertility, etc. In addition, review articles, systematic reviews, meta-analyses, original articles and short communications are welcomed and will be considered for acceptance in this issue.

Our objective is to offer our readers the newest data in the field of gynecological ultrasound.
