Contemporary Management of Special Subsets of Acute Coronary Syndromes Patients

It is my great pleasure and honor to announce this Special Issue on “Contemporary Management of Special Subsets of Acute Coronary Syndromes Patients”. In recent decades, treatment and outcome of patients with acute coronary syndromes (ACS) have significantly improved. Reperfusion therapy together with antithrombotic strategies have dramatically decreased the rate of adverse clinical events of patients hospitalized with ACS worldwide. However, different subgroups of patients such as those who develop cardiogenic shock or acute heart failure, those on dialysis or the so-called frail patients, still present very high event rates. In these patients, a personalization of care is highly desirable. In this Special issue we want to summarize and comment on the current evidence in favor of a specific treatment in each single subgroup of patients with ACS at high risk and try to identify specific diagnostic-therapeutic pathways.

We look forward to receiving your original research or review articles.

Message from the Editor-in-Chief

Reviews in Cardiovascular Medicine was launched in 2000 by MedReviews, LLC, in New York, NY. This journal was conceived to fill a critical gap for clinicians who were struggling with a rapidly expanding knowledge base in cardiovascular medicine with the convergence of basic science, clinical epidemiology, and therapeutic clinical trials. The founding co-editors were David P. Faxon, MD, past president of the American Heart Association, and Nolan E. Lepor, MD, who is considered a luminary in interventional cardiology. The contributing editorial board grew over time and Dr. Peter A. McCullough, MD, MPH ascended from contributing, to associate, to co-editor of the Journal. In 2018, the Journal took its next big step under the leadership of Dr. McCullough as editor-in-chief to become a truly international publication. Its offices moved to IMR Press in Hong Kong, and the editorial board was made more inclusive and representative of the world-wide contributors in academic cardiology. Additionally, the journal brought on expertise in translational medicine to help face the future of molecular medicine and its role in cardiovascular disease. Today Reviews in Cardiovascular Medicine is considered a top tier journal in cardiology with timely and comprehensive reviews covering all aspects of cardiovascular medicine including atherosclerosis, myocardial disease, arrhythmias, and valvular heart disease. The scope of papers ranges from population science, applied basic investigation, in-vitro diagnostics, and evidence-based strategy and therapeutic trials involving both pharmacologic intervention and interventional devices. The highly integrative style of the Journal anchored with evidence tables and instructive figures has garnered many citations over the years and many guidelines documents have relied upon works published in Reviews in Cardiovascular Medicine. Supplement and focus issues have been very popular among the readership and often are viewed as the most up-to-date compilations of new knowledge in cardiology and related specialities. The future is bright for academic cardiovascular medicine and Reviews in Cardiovascular Medicine is well positioned along side the clinician-investigator in the years to come as a trusted source of critical information and analysis.
