Submitted: 29 September 2022 Published: 2 February 2023

The *Frontiers in Bioscience-Elite* Editorial Office has retracted the paper mentioned above [1]. The reasons given are that: (1) The ethical approval is fake. (2) Most of the paper was not written by the authors, but was copied from a manuscript in preparation without permission. (3) The experiments were not conducted by the authors, and the data was obtained by other researchers. (4) The funding information is wrong. (5) The authors are not affiliated to the reported university.

The Editor-in-Chief and Editorial Office of the *Frontiers in Bioscience-Elite* have checked the case, and approved the retraction. IMR Press has been following the regulations of the Committee on Publication Ethics (COPE) and takes very seriously the responsibility to enforce strict ethical policies and standards.
